

GSTR-2A Reconciliation Tool

User Guide & Reference Document

Version 2.0

What is this tool?

This tool automates the GSTR-2A vs Purchase Book reconciliation process. It compares invoices filed by your suppliers on the GST Portal (GSTR-2A) with your internal Purchase Book — and tells you exactly what matches, what is missing, and what has value differences.

You select your Excel files, click Run — and get a ready report in seconds.

1. How to Run the Tool

Follow these steps every time you want to run a reconciliation:

Step 1 — Open the Application

- **gstr2a_app.exe** on your computer.
- The main window will open. No installation needed.

Step 2 — Select GST Portal File(s)

- **Browse Files** next to 'GST Portal Files'.
- You can select one file or multiple files at the same time.
- Example: Select April_GST.xlsx, May_GST.xlsx, June_GST.xlsx together.
- The tool will automatically read all sheets inside each file (B2B, CDNR, etc.).

Step 3 — Select Purchase Book File(s)

- **Browse Files** next to 'Purchase Book Files'.
- Again, you can select one or multiple files.
- Example: Select April_PB.xlsx, May_PB.xlsx, June_PB.xlsx together.

Step 4 — Select Output Folder

- **Browse** next to 'Output Folder'.
- Choose the folder where you want the report to be saved.
- Default is your Desktop.

Step 5 — Click Run

- ► **Run Reconciliation** button.
- Watch the Activity Log on the right side — it shows live progress.
- The progress bar will fill up as each step completes.
- When done, a popup will appear showing the summary counts.
- **Final_Reco_Report.xlsx** in the selected folder.

2. About the Input Files

2.1 GST Portal File (GSTR-2A)

This is the Excel file you download from the GST Portal. It contains invoices that your suppliers have filed in their GSTR-1.

- **GST Portal → Return Dashboard → GSTR-2A → Download Excel**
- The file has multiple sheets: B2B, B2BUR, CDNR, CDNR, IMPG, IMPS, etc.
- The tool automatically reads ALL sheets — you do not need to manually open or edit the file.
- Required columns the tool looks for: GSTIN, Invoice No, Taxable Value, IGST, CGST, SGST.

- Optional but useful: Trade/Legal Name (for vendor name in report), ITC Eligibility.

Supported Sheet Types

B2B — Regular invoices from registered suppliers
 B2BUR — Invoices from unregistered suppliers
 CDNR — Credit/Debit notes from registered suppliers
 CDNUR — Credit/Debit notes from unregistered suppliers
 IMPG — Import of goods (Bill of Entry)
 IMPS — Import of services
 Any other sheet — auto-detected if it has invoice data

2.2 Purchase Book File

This is your internal record of purchase invoices — usually exported from Tally, SAP, or any accounting software.

- Only the first sheet is read.
- Required columns: Invoice Number, GSTIN, Taxable Value, IGST/CGST/SGST.
- Optional: Party Name (shown as Vendor Name in report), Invoice Date.
- Column names can vary — the tool automatically recognises common variants.

Accepted Column Name Variants

GSTIN : 'gstn', 'Supplier GSTIN', 'Party GSTIN', 'Vendor GSTIN'
 Invoice Number : 'Invoice No', 'Invoice No.', 'Bill No', 'Document No'
 Taxable Value : 'Taxable Value', 'Taxable Amount', 'Assessable Value'
 IGST : 'IGST', 'IGST Paid', 'IGST Amount', 'Integrated Tax'
 CGST : 'CGST', 'CGST Paid', 'CGST Amount', 'Central Tax'
 SGST : 'SGST', 'SGST Paid', 'SGST/UT Paid', 'State Tax'
 Vendor Name : 'Party Name', 'Supplier Name', 'Trade Name'

3. Output Report — Sheet by Sheet

The output file is named Final_Reco_Report.xlsx and contains these sheets:

Sheet Name	What It Contains	What Action to Take
Summary	Overall counts and totals for all buckets + Vendor-wise table	Review first. Check ITC At Risk amount. Use Vendor-wise table to find which supplier has the biggest gap.
Matched	Invoices found in BOTH files with exact values	No action needed. These are clean reconciled invoices.

Mismatched	Invoices found in both files but tax values differ by more than ₹1	Contact supplier to correct the filing OR update your Purchase Book. Red cells show exactly which value differs.
Missing_in_GST_Portal	Invoices in your Purchase Book but NOT filed by supplier on GST Portal	You CANNOT claim ITC on these. Follow up with supplier to file their GSTR-1.
Missing_in_Purchase_Book	Invoices filed by supplier on GST Portal but NOT in your Purchase Book	Check if invoice was missed in entry. Could also be a wrong GSTIN — verify with supplier.
Cross_Match	GSTINs that appear in BOTH missing sheets at the same time	This vendor has some invoices filed and some not filed. Needs detailed review — call the supplier.
Vendor_Summary	One row per supplier showing PB totals, GST totals, and differences	Use this to quickly spot which vendor has the largest ITC gap. Sort by Diff_TV column.

4. How the Tool Works (Simple Explanation)

4.1 Reading Files

- All GST Portal files are stacked together into one list.
- All Purchase Book files are stacked together into one list.
- Column names are automatically detected and mapped to standard names.
- Blank rows, NaN values, and formatting issues are cleaned automatically.

4.2 Invoice Aggregation

One invoice can have multiple rows in the file — for example, same bill has 5% GST on one item and 18% GST on another item.

- The tool groups by GSTIN + Invoice Number and sums all values.
- Result: one row per invoice with total Taxable Value, IGST, CGST, SGST.
- This is done for BOTH the GST file and the Purchase Book.

Example: Aggregation

INV001 | 27AAFFK5555F1ZH | ₹5,000 | CGST ₹250 | SGST ₹250 (row 1)

INV001 | 27AAFFK5555F1ZH | ₹3,000 | CGST ₹540 | SGST ₹540 (row 2)

↓ combined into one row:

INV001 | 27AAFFK5555F1ZH | ₹8,000 | CGST ₹790 | SGST ₹790

4.3 Matching Logic

- Match is done on GSTIN + Invoice Number together.
- Invoice numbers are cleaned before matching — all spaces and special characters (/ , - , etc.) are removed and converted to uppercase.
- So INV/001 and INV-001 and INV 001 all become INV001 and match correctly.

4.4 Mismatch Rule

- If GSTIN + Invoice Number matches in both files BUT total tax difference is more than ₹1 — it goes to Mismatched sheet.
- The ₹1 tolerance handles minor rounding differences between systems.
- In the Mismatched sheet, the specific cell that differs is highlighted in red.

4.5 GSTIN Validation

- All GSTINs are checked against the standard 15-character format.
- Invalid GSTINs are flagged as warnings in the Activity Log and Summary sheet.
- Processing still continues — invalid GSTINs are not removed.

5. Output Column Reference

5.1 Standard Columns (all sheets)

Column	Meaning
GSTIN	15-digit GST Identification Number of the supplier
Invoice Number	Invoice number as entered in the source file
Vendor Name (PB)	Supplier name from your Purchase Book
Vendor Name (GST)	Supplier name from the GST Portal file
Taxable Value	Value of goods/services before tax
IGST	Integrated GST — applicable for inter-state supplies
CGST	Central GST — applicable for intra-state supplies
SGST	State GST — applicable for intra-state supplies
ITC Eligibility	Whether Input Tax Credit can be claimed (Yes / No / Ineligible / N/A)

5.2 Mismatched Sheet Extra Columns

- — Value from Purchase Book and GST Portal respectively
- — IGST from each side

- — **CGST from each side**
- — **SGST from each side**
- — **Difference (PB minus GST)**
- — **Total absolute tax difference. If this is more than ₹1, invoice is Mismatched.**

5.3 Vendor Summary Sheet Columns

- — **Total Taxable Value from PB and GST Portal**
- — **Total IGST from each side**
- — **Total CGST from each side**
- — **Total SGST from each side**
- — **Difference (PB minus GST). Red = gap exists.**

6. Common Questions

Q: Why does the same invoice appear in both Missing sheets?

This means the supplier has filed SOME invoices but not ALL. For example — they filed INV001 and INV002 on the portal, but INV003 and INV004 are missing. Meanwhile your Purchase Book has INV003 and INV004 but not INV001. This is shown in the Cross_Match sheet.

Q: What does ITC At Risk mean?

ITC (Input Tax Credit) is the tax you can claim back. If an invoice is Missing in GST Portal or Mismatched — you may not be able to claim that tax back. The Summary sheet shows the total tax amount at risk so you know the financial impact.

Q: The tool says 'no usable data' for a sheet — why?

That sheet does not have the required columns (Invoice Number + at least one tax column). The tool skips it automatically. This is normal for sheets like 'Home', 'Summary', 'Cover Page', etc.

Q: Can I select files from different months at once?

Yes. You can select January, February, March files together. All data is combined and reconciled as one report. If you want month-wise separation, run the tool separately for each month.

Q: What if my column names are different from the list?

The tool has a built-in dictionary of 30+ column name variants. If your column name is not recognised, the tool will fill it with zero and show a warning. In that case, rename your column in the Excel file to match one of the standard names listed in Section 2.

7. Tips for Best Results

- Always download a fresh GSTR-2A file from the portal before reconciliation.

- Make sure your Purchase Book includes the GSTIN column — without it, matching will fail.
- If a vendor has no GSTIN (unregistered), leave the GSTIN column blank — the tool handles it.
- Run the reconciliation month by month for better tracking rather than the full year at once.
- After reconciliation, follow up on Missing_in_GST_Portal invoices before filing GSTR-3B to avoid losing ITC.
- The Cross_Match sheet is the most important for follow-up — these vendors need immediate attention.

Quick Reference — What to Do with Each Sheet

Summary	→ Review totals, check ITC At Risk
Matched	→ No action needed
Mismatched	→ Call supplier to correct filing or fix your PB
Missing_in_GST_Portal	→ Follow up with supplier to file GSTR-1
Missing_in_Purchase_Book	→ Check if invoice was missed in your books
Cross_Match	→ Priority follow-up — supplier has partial filing
Vendor_Summary	→ Sort by Diff_TV to find biggest gaps
